According to W. Dietrich, of the II- in case the place occupied by the cot becomes insanitary it may be moved constructed how houses or shelter are to a clean location. constructed hos houses or shelter are essential to auccess in swine husbandry in all regions with a cold or variable climate. The best location for a
hog house is one that is well drained
and well lighted and will bormit access to pasture, to good shade, and
to a stream of running water that is
free from disease germs, where also
there are opportunities for making
wallows in clean mid.

The two general classes of hop iouses most in use are individual houses or bog cots and large bouse with individual pens, and of each claus there is a great variety of construction, depending upon individual needs and conditions. It is the purpose o

this article to summarize only information regarding the construction of individual houses or hog cots as given in recent station publications.

they are sometimes called, are built or any other form of cot, so that they in many different ways. Some are can be replaced. Its own weight will built with four upright walls and a hold the cot in place on the skilds shed roof, each of which (the walls while being moved. . .

R. Shaw, of the Michigan station, states that, when climatic conditions are not too rigorous, cots only may be employed for handling the entire hard. celled as a means of handling nearly all classes of pigs. Cots are especially all classes of pigs. Cots are especially destrable for dry-brood sows and young males and females being reared for breeding purposes. Their great advantages are that they provide an abundance of fresh air, sunshine and exercise.

• Figures 3 and 4 represent forms of cots now in use at the Michigan Agricultural college, figure 3 being a form which has been in use at the institu-

tion for some years.

The form of cot shown by figure 3 is destrable in that it is warm in winter, but objectionable in that it provides little protection against the extreme heat of summer. It is also considered a good form of cot for the brood sow to farrow in in moderate weather, as she can not lie down close enough to the sloping roof to crush her pigs, as against a wall. A genform of cot permanently to the akids or runners on which it is built. These are the first to decay and along with them the lower ends of the boards thus making repairs impossible, ever though the balance of the structure re Mr. Dietrich says on this subject: mains sound. A separate pair of Individual hog houses, or cots, as skids should be constructed for this

making the moving of these small ouses or cots an easy matter. This is shown by figures 1 and 2. Others are built with two sides stoping in toward the top so as to form the roof, now in use in our hog lots. It is six as in figure 3. These are built on by eight feet at the foundation, with skids and when necessary can be the sides raised perpendicularly three moved as a whole by being drawn by feet before receiving the half pitch a horse. They are built in several roof boards. The center boards on in the front end, above the door, while all may have a small door in the rear

cots should be furnished with skids, so that they can be moved frequently by a team and one man and not taken to pieces and moved in sections. Figure 4 represents a form of co

recently designed and constructed and opening thus made is covered with strong woven wire, clamped above and below between inch boards. The inner clamp boards project an inch be youd outer ones, thus breaking the joints and preventing any draft when the openings are closed. The two ridge boards are also hinged so that they can be opened during hot weather. These openings permit a free circulation of air, which not only lowers the temperature but greatly relieves the oppression of the pigs seeking Fig. 3.—Hog cot with sloping sides on skids.

These openings close down tightly, leaving warm quarters during the coldest weather. The cots proper are supported on skids to which they end near the apex for ventilating purposes. They are also built in differ by the blocking of the ties across both ends. A two-inch bottom is used or The arguments in favor of this type not, as desired. This flooring is cut in uses for swine are that each sow lengths to fit crosswise and rest on

PRESENTS SAUSAGES TO KAISER Butchers' Guild Prepares Gift to Suit

Emperor's Taste. Berlin.—The German emperor received on New Year's day the usual deputation from the butchers' guild of Halle, who, according to ancient custom, presented gifts of sausages eggs and salt to the imperial family

The deputation consisted of three master butchers, who on this occasion wore their historical costume of long coats, knee breeches, silk stockings and buckled shoes. It need not be said that the sausages were made from the meat of specially selected unimals, born and bred on the fat meadows along the Saale river.

The emperor's sausages were well smoked, for his majesty prefers this kind, and they were neatly packed in a beribboned basket. The empress is fond of goose liver sausage, and so she was presented with a couple of the very finest, tied up with red rib bons. Other sausages were destined for the Imperial children. Those decked for the princes were done up in blue bands, while those for the princesses had rose-colored ribbons The gifts were accompanied by the donor's New Year's greetings in verse.

Young Men Form "Lemon Club." South Norwalk, Conn .- Norwalk has a unique social organization called the Lemon club, and no young man is eligible to membership unless he has been rejected by his lady love and is now sworn to bachelorhood. The bylaws call for an admission of the re-ception of a lemon and a pleage to leave an fruit alone in the future, in hiding lemons and peaches. Many of the prominent young men of the town cent meeting officers were elected, as follows: Main squeeze, Arthur C Hoyt; chief julce extractor, Howard naker; keeper of plps, Horace Sig-nish; chief hander out, Edward R O'Brien; main peeler, Addison Austin
